

Mannington and the Environment

Our Environmental Commitment

At Mannington, our environmental position is clear and straightforward: Actions Speak. We focus on what we as a flooring company can do to increase our manufacturing efficiency and product performance while decreasing our environmental impact.

This belief grew from our determination to be the best people to do business with in our industry. It means looking beyond customer service and product innovation to legacy. And as a family-owned, fourth-generation company, we know a little about legacy. It's more than a good marketing story; it's values, vision and good business.

Our Vision

We believe in doing the right thing for our products, our customers, our neighbors and the environment we share. At Mannington, sustainability comes down to the decisions we make every day – throughout the company – and how those decisions flow outward to the world around us.

Our Values

A culture of innovation Innovation is a big part of who we are. We're always examining our operations and investing in new technologies to make continual environmental improvements. Not just because it's good business, but because it's the right thing to do.

Around here, actions speak At Mannington, we believe in talking honestly about what we're doing, without over claiming or misleading. And by speaking publicly about our environmental initiatives, we open the door to suggestions on what we can do better.

Good people doing the right thing As a privately owned company and fourth-generation family business, we feel a responsibility to be good neighbors and good people to do business with. At each of our sites throughout the country, our associates are deeply involved in their local communities, helping with their time, their dollars and their belief in a better world for the generations to come.

Choices
for a
better
world

Environmental attributes

Adura®
